Conversations with Manufacturers of Portable Rock Crushers

Dave Slaughter. Cedarapids in Cedar Rapids, IA. 319.363.3511.

<http://www.cedarapids.com/>

Cedarapids has neither designed or constructed portable rock crushing plant with baghouse. Although extremely rare, a baghouse will have been installed somewhere at some time on various elements of a rock crushing plant perhaps located in a city or jurisdiction demanding the controls be installed. The ductwork and baghouse would have been designed and constructed by someone other than the manufacturer of the plant.

Cedarapids does not offer a "baghouse" option for the portable rock crushing plants it manufactures.

Frank Church. Fabtec in Moscow, ID. 208.883.8433. <http://www.fabtec.net/>

Frank indicates he has been in the business for 20 years and has not personally observed a portable rock crushing plant employing a baghouse. Frank has read a journal article describing an instance when ductwork and a baghouse has been installed under special circumstances when mandated by the local community.

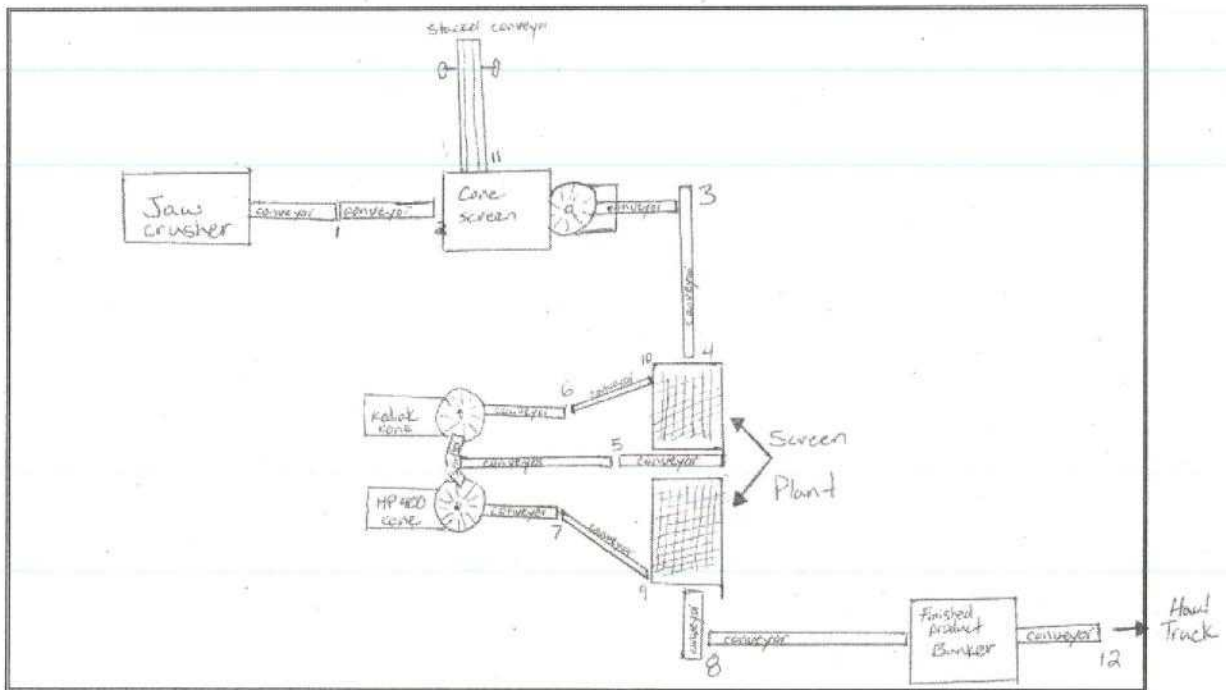

Fabtec does not offer a "baghouse" option for the portable rock crushing plants it manufactures.

Jerry Mangrich. Universal Engineering in Cedar Rapids, IA. 319.369.5416.

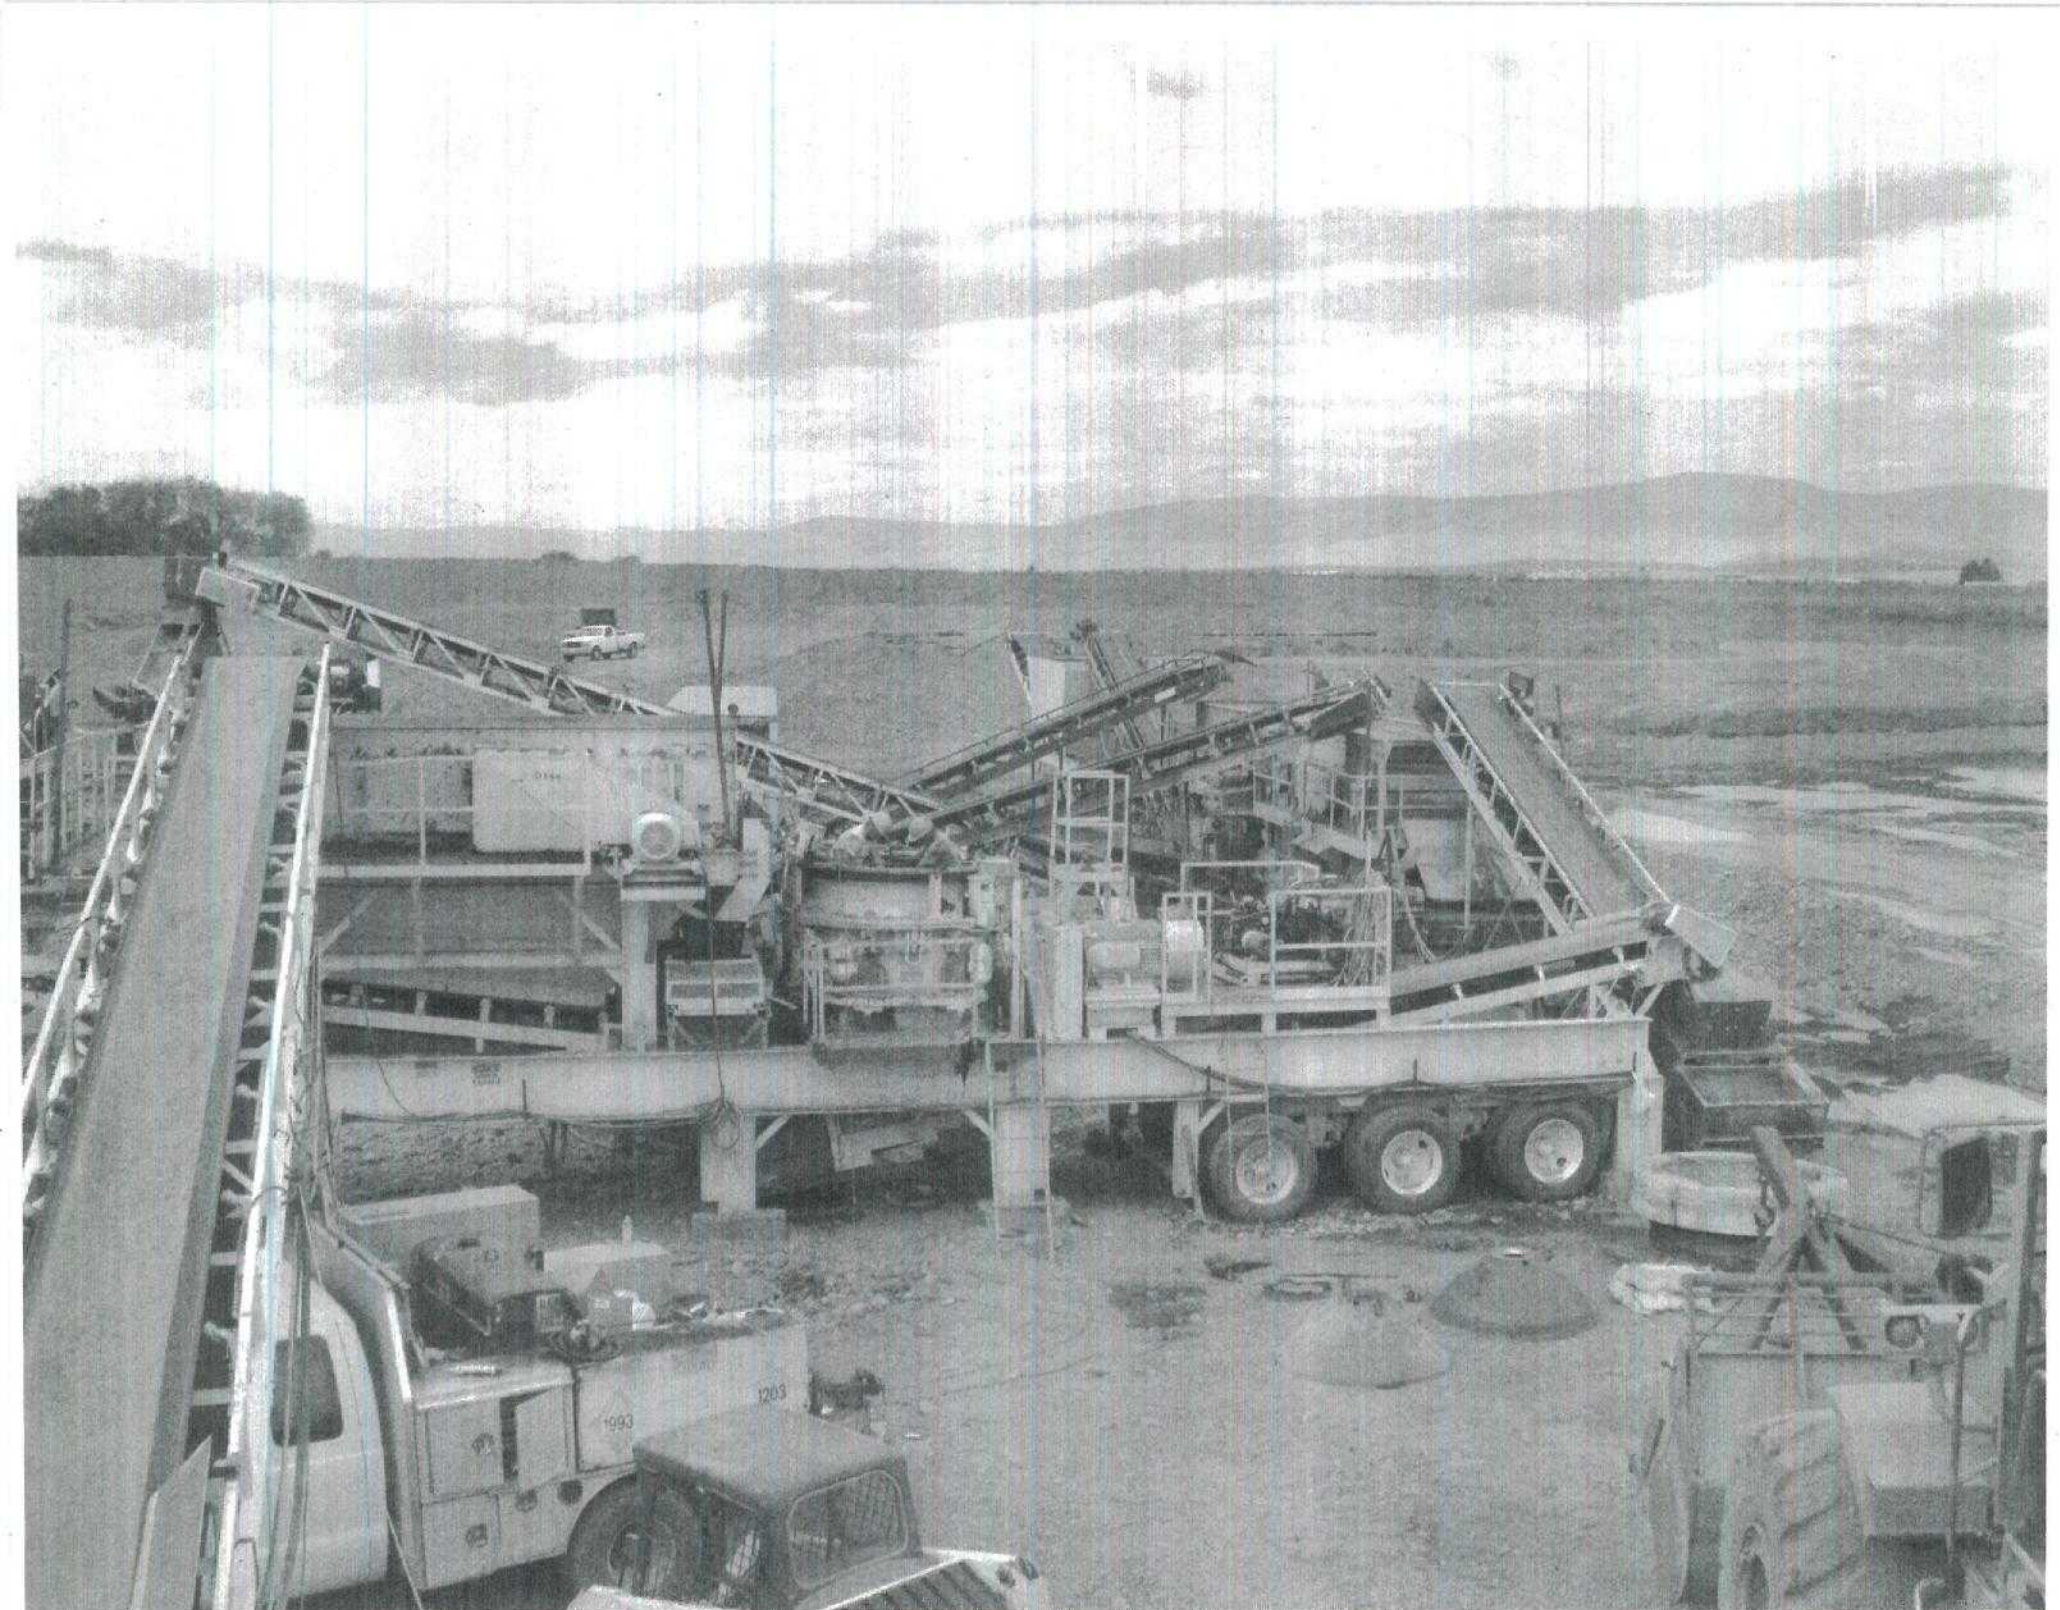

<http://www.universalcrusher.com/>

Jerry indicates he has been in the business for 29 years and has not personally observed a portable rock crushing plant employing a baghouse. Jerry recalls responding to inquiries from clients regarding feasibility of baghouse installation years ago. Although Jerry would provide quotes, he never once sold one of the systems. It is simply not cost effective. If required to install and operate baghouse particulate matter control system, many facilities would simply move or shut down. The baghouse would have to be very large and the bags would have to be wrapped very frequently. Equipment would be expensive and hard to maintain.

Universal Engineering does not offer a "baghouse" option for the portable rock crushing plants it manufactures.
